

Granite Gargoyles – Food Service API

Features!

- Can compare the “hungriest” places in the hospital
- Can see the most popular food Items
- Can order to anywhere!
- Display availability of food
 - If unavailable it wont even show up on the menu
- Easy complete and assign requests right on home page

How to Run

Step 1: Include the library

Step 2: Create a FoodRequest object

Step 3: call the run() function

Congrats! You’re done!

(For more detail, check the README)

FAQ

Q:Where is everything stored/coming from?

A:Any embedded database of course!

Q:When I run for the first time can I test any of the features immediately?

A:Of course we included some default items for you to use that you can remove whenever you want!
